

## We're updating IMRT billing rules to include professional claims

In the July 2023 *The Record* article, [Reminder: IMRT delivery codes](#), we detailed editing for facility claims to prevent separate billing for intensity-modulated radiation therapy, or IMRT, delivery services within 14 days of the IMRT planning code. This fall, we will expand this editing to include professional claims.

To ensure a smooth transition, health care providers have a 90-day period to review and correct their billing practices to comply with this guideline. After this 90-day period, any claims that don't comply may be subject to recovery. We encourage providers to take this opportunity to review their billing procedures and make any necessary adjustments to avoid potential recoveries.
